

Riding the Wave Recommendations for Europe's Ocean Future

**Advancing the EU Ocean Pact
through Science, Innovation
and Cooperation**

**CYPRUS
MARINE &
MARITIME
INSTITUTE**

Policy recommendations prepared by the Cyprus Marine and Maritime Institute (CMMI) following the conference *Riding the Wave: Advancing the EU Ocean Pact through Science, Innovation and Cooperation*, held in Ayia Napa, Cyprus, on 11–12 May 2026.

Executive Summary

In May 2026, more than **300 participants from across Europe and beyond** gathered in Ayia Napa, Cyprus, for the conference *Riding the Wave: Advancing the EU Ocean Pact through Science, Innovation and Cooperation*. Convened in the context of the Cyprus Presidency of the Council of the European Union and co-organised by the Cyprus Marine and Maritime Institute (CMMI), the conference brought together policymakers, researchers, innovators, industry representatives, investors, regional authorities, civil society organisations and international partners to explore how ocean science, innovation and investment can accelerate the implementation of Europe's ocean agenda.

The conference was held at a **pivotal moment for European ocean policy**. The adoption of the European Ocean Pact has established a new framework for integrated ocean governance, while the European Commission is simultaneously preparing a future Ocean and Water Research and Innovation Strategy, advancing consultations on coastal communities and islands, and launching a new EU Ports Strategy. Together, these initiatives offer a unique opportunity to strengthen Europe's leadership in sustainable ocean management, maritime innovation and blue economy development.

Discussions throughout the conference demonstrated broad consensus that Europe possesses world-class scientific capabilities, growing innovation ecosystems and increasing political ambition. However, participants repeatedly highlighted the need to **accelerate implementation, strengthen coordination across sectors and governance levels, and improve the translation of evidence-based scientific knowledge and digital ocean science tools into practical policy solutions and market deployment**.

A recurring message across all sessions was that **Europe's relationship with the ocean is evolving**. While protecting and restoring marine ecosystems remains essential, participants stressed that the **ocean should increasingly be recognised as a strategic asset** that underpins Europe's prosperity, security, competitiveness, resilience and quality of life. Ocean observation systems, marine data, digital ocean tools, ocean forecast, maritime infrastructure, coastal communities, ports and innovation ecosystems should therefore be viewed not only as environmental assets but also as critical components of Europe's future.

The conference also highlighted the **importance of regional approaches**. In particular, participants identified the Mediterranean as a strategic sea basin where integrated solutions for ocean observation, ocean data and digital tools, climate adaptation, restoration, sustainable blue economy development and maritime innovation can be developed, tested and scaled. The Mediterranean's diversity of ecosystems, economies and governance frameworks makes it a natural laboratory for demonstrating approaches that can subsequently be transferred to other European sea basins.

Another major theme concerned the **transition from research and innovation to deployment and impact**. Discussions consistently showed that Europe does not suffer from a lack of ideas, technologies or funding opportunities. Instead, the principal challenge lies in creating investable pathways that connect research excellence, technology developments, innovations and validation, market uptake and long-term investment. Participants called for greater alignment between research programmes, innovation support mechanisms, investment instruments and policy frameworks.

Based on the discussions and outcomes of the conference, **CMMI proposes ten flagship recommendations and seven supporting recommendations** intended to contribute to ongoing European discussions on the European Ocean Pact, the future Ocean and Water Research and Innovation Strategy, the development of the EU Ports Strategy, and future initiatives supporting coastal communities and islands.

These recommendations are **addressed primarily to European institutions**, while also recognising the critical roles of **Member States, regional authorities, industry, investors, research organisations and civil society** in shaping Europe's ocean future.

Riding the Wave Recommendations at a Glance

- 1 Recognise the Ocean as a Strategic Asset for Europe
- 2 Establish the Mediterranean Sea as one of Europe's Leading Ocean Innovation and Cooperation Testbeds
- 3 Deliver the European Ocean Observation Initiative through Strong Regional and National Capacity
- 4 Accelerate Europe's Marine Digital Infrastructure and Digital Twin Ocean
- 5 Treat Ocean Science, Ocean Data and Intelligence as Critical Infrastructure for Governance, Security and Resilience
- 6 Scale Marine Restoration and Blue Carbon Solutions
- 7 Adapt Policy and Financing Frameworks to Accelerate Maritime Decarbonisation
- 8 Develop Green Port Transition Pathways among port seascapes
- 9 Shift from Funding Projects to Building Investability
- 10 Establish Sea-Basin Blue Investment Platforms Linked to Mission Ocean and Waters Lighthouses

Introduction

Europe's ocean is a shared natural heritage, a source of prosperity and wellbeing, and an increasingly strategic domain that underpins economic competitiveness, food systems, energy security, climate resilience and international cooperation.

The conference *Riding the Wave: Advancing the EU Ocean Pact through Science, Innovation and Cooperation* was designed to support Europe's transition towards a more integrated, knowledge-based and innovation-driven approach to ocean governance. The conference programme was structured around two complementary themes.

The first day focused on the **implementation of the European Ocean Pact**, exploring how ocean science, observation systems, governance mechanisms, restoration efforts and regional cooperation can strengthen evidence-based policymaking and support sustainable management of marine resources.

The second day focused on the **transition from ocean research and development to market deployment**, addressing investment ecosystems, innovation pathways, maritime decarbonisation, port transformation and the role of finance in scaling sustainable ocean solutions.

Across both days, participants emphasised that the **future success of European ocean policy will depend on Europe's ability to connect science, policy, innovation and investment into a coherent and mutually reinforcing system**.

The recommendations presented in this report reflect the perspectives and insights shared during keynote and plenary sessions, thematic workshops, investment-focused discussions and the Funders Forum. They do not constitute a formal political declaration or negotiated outcome document. Rather, they represent CMMI's synthesis of the key messages emerging from the conference and are **offered as a contribution to ongoing European policy discussions**.

Key Messages from the Conference

The Ocean must be Recognised as a Strategic Asset

Europe's ocean is increasingly central to economic competitiveness, energy sovereignty, climate resilience, maritime security, digital infrastructure and quality of life. Ocean policy should therefore be approached not solely through an environmental lens but as a strategic investment in Europe's strategic autonomy and preparedness that underpins Europe's prosperity, security, competitiveness, resilience and quality of life.

The Challenge is Investability, not Innovation

Europe possesses strong scientific capabilities and a growing portfolio of ocean technologies. The principal bottleneck lies in creating coherent pathways that transform innovation into deployable solutions capable of attracting investment and achieving scale.

Science and Data are Foundational Infrastructures

Ocean observation systems, marine data services, digital ocean tools, research infrastructures and forecasting capabilities are essential enablers of effective policymaking, innovation and investment. Europe must continue to strengthen these capacities while ensuring that benefits reach all sea basins and coastal regions. The challenge is not only to generate more data, but to convert data into usable knowledge.

Ports and Coastal Territories are Critical Transition Hubs

Ports, coastal communities and maritime regions will play a decisive role in Europe's blue transition. They represent the locations where decarbonisation, innovation, resilience, restoration and economic development converge and where integrated solutions must be implemented.

The Mediterranean can become Europe's Ocean Innovation Testbed

The Mediterranean offers a unique opportunity to develop, test and demonstrate integrated solutions for ocean governance, climate adaptation, restoration, observation, sustainable blue economy development and innovation deployment.

Cross-sector collaboration and the integration of Science, Policy, Industry and Investment are essential

Successful implementation of the European Ocean Pact will depend on stronger collaboration across these communities, and strengthened science and policy interface to accelerate the transition from research and innovation to policy uptake, investment and deployment.

**Riding the Wave
Flagship Recommendations
for Europe's Ocean Future**

Recognise the Ocean as a Strategic Asset for Europe

Why this matters

Europe's ocean is increasingly central to economic prosperity, food security, energy sovereignty, climate resilience, digital connectivity, maritime security and geopolitical stability. While ocean policy has traditionally focused on environmental protection and resource management, participants highlighted the need for a broader strategic vision that recognises the ocean as a critical asset underpinning Europe's strategic autonomy and preparedness, as well as Europe's prosperity, security, competitiveness, resilience and quality of life.

The ocean supports key economic sectors, hosts critical infrastructure including ports, energy systems and subsea cables and pipelines, provides essential ecosystem services and plays a growing role in Europe's security architecture. A more strategic and integrated approach is required to fully realise these benefits while ensuring long-term economic, social and environmental sustainability.

Recommendation

The European Union Member States should also formally recognise the ocean as a strategic asset that contributes simultaneously to environmental sustainability, economic competitiveness, resilience, security, innovation and societal wellbeing.

Suggested Actions

- Integrate ocean considerations into industrial, energy, digital, security and resilience policies.
- Strengthen ocean science and policy interfaces for enabling knowledge transfer for evidenced-based decision making.
- Strengthen recognition of ocean-related infrastructure as critical infrastructure.
- Promote whole-of-government and evidence-based approaches to ocean governance.
- Increase investment in ocean-related capabilities that support competitiveness and resilience.
- Strengthen public awareness of the ocean's strategic role for Europe.

Establish the Mediterranean as one of Europe's Leading Ocean Innovation and Cooperation Testbeds

Why this matters

The Mediterranean faces many of the challenges that Europe seeks to address through the Ocean Pact, including climate change, biodiversity loss, pollution, maritime traffic, coastal pressures and competing uses of marine space. At the same time, it offers exceptional opportunities for innovation, observation, restoration and regional cooperation.

Participants repeatedly identified the Mediterranean as a natural laboratory where integrated solutions can be developed, tested and demonstrated before being scaled across Europe.

Recommendation

The European Union should establish the Mediterranean as one of the main sea-basin testbeds for integrated ocean governance, research and innovation, climate adaptation, restoration, maritime decarbonisation and blue investment.

Suggested Actions

- Strengthen cooperation among Mediterranean research and innovation actors.
- Support Mission Ocean and Waters lighthouse activities and large-scale demonstration projects.
- Promote cross-border ocean observation and monitoring initiatives.
- Develop integrated sea-basin innovation programmes.
- Foster stronger cooperation between northern and southern Mediterranean partners.

Deliver the European Ocean Observation Initiative through Strong Regional and National Capacity

Why this matters

The European Commission has recently launched the ambitious OceanEye Ocean Observation Initiative. Its success will depend on European-level infrastructure which is often built on the strength of national and regional observation systems capable of generating sustained and geographically balanced data.

Participants stressed that observation capacity must be strengthened across all sea basins and coastal regions to ensure that Europe develops a truly integrated and representative ocean knowledge system.

Recommendation

Implement the European Ocean Observation Initiative through coordinated national, regional and private investments that complement European funding and strengthen regional and national observation capacities while ensuring balanced participation across European sea basins, positioning regional authorities as active governance partners in the design and co-delivery of observation networks, not solely as capacity providers.

Suggested Actions

- Establish long-term funding mechanisms for ocean observing systems beyond project-based funding lifecycles
- Strengthen subsurface observation capacity, particularly in under-observed sea basins
- Improve interoperability of national observation systems.
- Support regional observation networks and centres of excellence.
- Ensure sustained funding mechanisms for ocean observing activities.
- Engage regional authorities as active governance partners in the design and co-implementation of observation networks, drawing on their territorial knowledge and Cohesion Policy-funded monitoring capacities

Accelerate Europe's Marine Digital Infrastructure and Digital Twin Ocean

Why this matters

Europe is building a world-leading marine digital ecosystem through EMODnet, the Copernicus Marine Service, EDITO (collectively the European Digital Twin Ocean). These platforms are becoming critical infrastructure for research, policy, innovation, maritime operations and investment decisions. The challenge now lies in accelerating operational deployment and ensuring interoperability among systems.

Recommendation

Accelerate the development and operational deployment of Europe's marine digital infrastructure to create a fully integrated ecosystem supporting science, policy, industry and society.

Suggested Actions

- Accelerate implementation of the Digital Twin Ocean.
- Strengthen interoperability among marine data platforms.
- Facilitate access to marine data services.
- Support operational applications for industry and policymakers.
- Encourage international cooperation around marine digital services.

Treat Ocean Data and Intelligence as Critical Infrastructure for Governance, Security and Resilience

Why this matters

As Europe strengthens its ocean observation capabilities, the value of ocean data lies not only in its collection but in its application. Ocean intelligence increasingly underpins evidence-based policymaking, maritime governance, climate adaptation, disaster preparedness, maritime domain awareness, protection of critical infrastructure, and economic planning. Participants emphasised that ocean data, digital ocean tools and forecasting services should be recognised as strategic assets that support Europe's resilience, security and competitiveness across multiple policy domains.

Recommendation

Recognise ocean data, forecasting services and marine digital intelligence as critical infrastructure that supports integrated governance, resilience, security and informed decision-making across Europe.

Suggested Actions

- Integrate ocean intelligence into European resilience, security and climate adaptation strategies.
- Strengthen the use of ocean data in maritime spatial planning and evidence-based policymaking.
- Improve coordination between environmental monitoring, maritime domain awareness and critical infrastructure protection.
- Enhance interoperability and accessibility of marine data services to support public authorities and industry.
- Establish long-term governance and investment frameworks that ensure the sustained provision of strategic ocean intelligence.

Scale Marine Restoration and Blue Carbon Solutions

Why this matters

While Europe should prioritise protection of existing ecosystems and reduction of pressures before undertaking active restoration interventions, marine restoration and blue carbon ecosystems offer opportunities to address biodiversity loss, strengthen resilience and contribute to climate mitigation. Participants highlighted the need to move from isolated pilot projects toward larger-scale implementation and stronger integration into policy frameworks.

Recommendation

Prioritise protection of existing ecosystems while also accelerate large-scale marine restoration and establish a European roadmap for blue carbon solutions that supports climate, biodiversity and coastal resilience objectives.

Suggested Actions

- Expand restoration programmes.
- Develop common methodologies for blue carbon accounting.
- Strengthen monitoring and verification systems.
- Promote nature-based solutions.
- Support coastal community participation in restoration efforts.

Adapt Policy and Financing Frameworks to Accelerate Maritime Decarbonisation

Why this matters

Technological solutions for maritime decarbonisation are advancing rapidly. However, deployment is often constrained by fragmented regulatory frameworks, insufficient financing mechanisms and uncertainty regarding future market conditions.

Recommendation

Adapt European policy, regulatory and financing frameworks to accelerate the deployment and scaling of maritime decarbonisation solutions.

Suggested Actions

- Align regulatory frameworks with innovation timelines.
- Expand financing mechanisms for maritime transition technologies.
- Support demonstration and first-of-a-kind deployments.
- Consider lifecycle emissions accounting and transparent verification systems for alternative fuels
- Reduce barriers for alternative fuels and clean propulsion systems.
- Promote coordinated action across the maritime value chain.

Develop Green Port Transition Pathways among port seascapes

Why this matters

Ports are becoming critical hubs where decarbonisation, energy transition, logistics, resilience, innovation and coastal development converge. They will play a central role in implementing the European Ocean Pact and the new EU Ports Strategy.

Recommendation

Support the development of integrated green port transition pathways that combine sustainability, competitiveness, innovation and resilience objectives.

Suggested Actions

- Promote integrated port transition plans.
- Strengthen links between ports and coastal communities.
- Support alternative fuel infrastructure.
- Foster innovation ecosystems around ports.
- Encourage adoption of nature-positive port development approaches.

Shift from Funding Projects to Building Investability

Why this matters

Europe does not lack ocean innovation. The primary challenge lies in creating investable pathways capable of connecting research, technology development, demonstration, deployment and market adoption.

Participants repeatedly highlighted that the key bottleneck is not capital scarcity but investability.

Recommendation

Future European blue economy programmes should place greater emphasis on building investability, enabling coordinated pathways from innovation to deployment and scale.

Suggested Actions

- Support project preparation and de-risking activities.
- Strengthen innovation adoption ecosystems.
- Develop shared intelligence platforms for investors.
- Facilitate collaboration among public, private and philanthropic actors.
- Promote long-term investment readiness approaches.

Establish Sea-Basin Blue Investment Platforms Linked to Mission Ocean and Waters Lighthouses

Why this matters

Mission Ocean and Waters lighthouses offer a unique opportunity to connect policy objectives, innovation ecosystems and investment communities around concrete demonstration environments. Participants identified the need for dedicated mechanisms capable of aligning public funding, private capital and philanthropic investment around sea-basin priorities.

Recommendation

Develop sea-basin investment platforms linked to Mission Ocean and Waters lighthouse activities to accelerate deployment, replication and scaling of innovative ocean solutions.

Suggested Actions

- Build investment ecosystems around lighthouse projects.
- Connect investors with regional innovation pipelines.
- Support blended finance approaches.
- Facilitate knowledge exchange across sea basins.
- Develop investment readiness programmes linked to lighthouse initiatives.

Supporting Recommendations

11 Promote Integrated Approaches to Maritime Spatial Planning

Why this matters

As maritime activities continue to expand across European sea basins, effective governance requires integrated planning frameworks capable of balancing environmental protection, economic development, energy production, maritime transport and societal needs. Maritime Spatial Planning (MSP) has emerged as a critical governance tool, yet implementation remains uneven across Member States.

Recommendation

Further promote integrated approaches to Maritime Spatial Planning as a strategic instrument for integrated ocean governance at both national and sea-basin level.

Suggested Actions

- Use the upcoming Ocean Act as a tool to promote stronger cross-sectoral planning approaches.
- Enhance cross-border MSP cooperation.
- Strengthen integration between MSP and ecosystem-based management.
- Improve stakeholder participation in planning processes.
- Develop stronger links between MSP and climate adaptation strategies.

12 Promote Integrated Solutions to Marine Pollution

Why this matters

Marine pollution remains one of the most significant pressures affecting Europe's seas and coastal communities. Addressing pollution requires integrated approaches that connect land-based and sea-based sources while combining prevention, monitoring, innovation and behavioural change.

Recommendation

Develop integrated approaches to tackling marine pollution that address multiple pollution sources simultaneously while promoting innovation and prevention.

Suggested Actions

- Accelerate deployment of pollution reduction technologies.
- Promote circular economy approaches.
- Improve coordination between freshwater and marine policies.
- Support citizen engagement and ocean literacy initiatives.

13

Strengthen Europe's Ocean Technology Testing and Demonstration Capacity

Why this matters

Europe possesses strong ocean research and innovation capabilities but often struggles to move technologies from laboratory environments into operational deployment. Access to testing sites and demonstration environments remains fragmented.

Additionally, regional authorities, through their territorial development instruments and Smart Specialisation Strategies (S3) that anchor blue economy priorities at regional level, often host the innovation ecosystems in which testing facilities are embedded — yet they remain underutilised as governance partners in the design and coordination of European testing networks.

Recommendation

Establish a coordinated European network of ocean technology testing, validation and demonstration facilities that supports innovation uptake and market deployment.

Suggested Actions

- Connect existing testing facilities into European networks.
- Support open-access testing infrastructures.
- Facilitate collaboration between research organisations and industry.
- Promote interoperability and common standards.
- Strengthen links between testing facilities and investment ecosystems.
- Recognise regional authorities as key actors in the governance of ocean technology testing and demonstration networks, leveraging their Smart Specialisation Strategies (S3) to ensure territorial coherence across sea basins.

Create Seamless Research-to-Market Pathways for Ocean Innovation

Why this matters

Europe already offers numerous programmes supporting research, innovation, entrepreneurship and investment. However, these instruments often operate independently, creating gaps between technology development, demonstration and commercial deployment.

Additionally, a critical missing layer in this coordination architecture is the multi-level governance dimension: regional authorities act as essential intermediaries between EU-level frameworks and local innovation actors, yet Cohesion Policy instruments — including Interreg programmes and regional Smart Specialisation Strategies (S3) — remain insufficiently integrated into blue economy innovation pathways

Recommendation

Improve coordination among existing European, national and regional support mechanisms to create coherent innovation pathways from research to market.

Suggested Actions

- Improve visibility of existing support instruments.
- Strengthen coordination among funding programmes.
- Develop common innovation roadmaps.
- Facilitate transitions between technology readiness levels.
- Encourage collaboration among research, industry and investment communities.
- Integrate Cohesion Policy instruments as structured layers within blue innovation pathways.
- Establish multi-level governance frameworks that formally position regional and local authorities as active intermediaries among EU and national vis-à-vis local actors.

Empower Maritime Regions and their Coastal Communities, as well as Islands and Small Ports as Drivers of the Blue Transition

Why this matters

Maritime regions, coastal communities, islands and small ports are often the first to experience the impacts of climate change, environmental degradation and economic transition. At the same time, they represent important centres of innovation, stewardship and local knowledge.

Recommendation

Recognise maritime regions, coastal communities, islands and small ports as active partners in delivering Europe's ocean agenda and strengthen their capacity to participate in the blue transition.

Suggested Actions

- Support place-based innovation approaches.
- Strengthen local participation in ocean governance.
- Improve access to funding opportunities.
- Promote community-led adaptation initiatives.
- Encourage knowledge exchange across coastal regions.

Invest in Blue Skills, Ocean Literacy and Future Leadership

Why this matters

Delivering Europe's ocean ambitions will require a new generation of scientists, engineers, entrepreneurs, policymakers and maritime professionals equipped with interdisciplinary skills and a strong understanding of ocean challenges and opportunities.

Recommendation

Strengthen investments in blue skills, ocean literacy and leadership development to support Europe's long-term ocean resilience and competitiveness.

Suggested Actions

- Promote interdisciplinary education programmes.
- Support lifelong learning opportunities.
- Strengthen links between academia and industry.
- Expand youth engagement initiatives.
- Improve public understanding of ocean issues.

Integrate Maritime Cultural Heritage into Ocean Governance and Coastal Resilience

Why this matters

Maritime cultural heritage forms an essential part of Europe's coastal identity. More integrated approaches are needed to recognise cultural heritage as a valuable component of ocean governance and resilient coastal development.

Recommendation

Integrate maritime cultural heritage into ocean governance and coastal resilience policies to strengthen culturally informed decision-making.

Suggested Actions

- Promote monitoring, protection and stewardship approaches that link natural and cultural heritage.
- Support the documentation, safeguarding and responsible use of oral histories and local knowledge.
- Strengthen the role of tourism, fisheries and coastal communities in ocean governance.
- Encourage place-based cultural heritage initiatives.

Legacy for Europe's Ocean Future: Building Momentum for Continued Action

The first half of 2026 marked an important period for Europe's ocean agenda. During these months, several major initiatives reached significant milestones, collectively demonstrating a growing recognition of the ocean's strategic importance for Europe's future.

Most notably, the European Ocean Pact established a new strategy for integrated ocean governance, bringing together priorities related to ocean health, sustainable competitiveness, coastal communities, research and innovation, maritime security and international cooperation under a shared vision for Europe's ocean future.

At the same time, preparations advanced for the future Ocean and Water Research and Innovation Strategy, reflecting increasing recognition that **scientific excellence, technological innovation and ocean knowledge infrastructure must play a central role in supporting implementation of the Ocean Pact and Europe's broader sustainability ambitions.**

Significant progress was also achieved in strengthening Europe's ocean observation capabilities. The launch of the European Ocean Observation Initiative signals a renewed commitment to building the scientific and operational infrastructure needed to better understand, monitor and manage Europe's seas. Combined with continuing investments in marine data services, digital infrastructures and the future Digital Twin Ocean, these developments have the potential to **transform Europe's capacity to generate actionable ocean intelligence.**

The first half of 2026 also saw growing attention devoted to Europe's ports, maritime industries and coastal territories. The publication of the EU Ports Strategy, ongoing work on the Industrial Maritime Strategy and discussions on the future of coastal communities and islands all reflect increasing **recognition that the blue transition must be anchored in places where people live, work and innovate.**

At regional level, the **Mediterranean has emerged as an increasingly important space for cooperation, innovation and demonstration.** New initiatives, strengthened partnerships and forthcoming Mission Ocean and Waters lighthouse activities offer opportunities to accelerate integrated approaches to restoration, climate adaptation, maritime innovation and sustainable blue economy development across the basin.

The Riding the Wave conference was convened within this broader context of accelerating ambition and action. Discussions throughout the event demonstrated that Europe possesses the scientific expertise, innovation capacity and collaborative spirit required to deliver meaningful progress. Europe's challenge is increasingly not one of knowledge generation, but of **implementation**, highlighting the need to accelerate the transition from research and innovation to operational deployment, market uptake and measurable impact. Participants also recognised that success will depend on **maintaining momentum, strengthening cooperation across sectors and governance levels, and ensuring that investments in science, innovation and infrastructure translate into tangible benefits for people, communities and ecosystems.**

Looking ahead, Europe has a unique opportunity to position itself as a global leader in sustainable ocean governance, blue innovation and maritime resilience. Realising this ambition will require continued collaboration among European institutions, Member States, regions, industry, investors, research organisations and civil society.

The recommendations presented in this report are offered in that spirit: as a **contribution to a shared European effort to ensure that the ocean continues to support prosperity, resilience, sustainability and opportunity for future generations.**

Publication Information

Riding the Wave Recommendations for Europe's Ocean Future

Advancing the EU Ocean Pact through Science, Innovation and Cooperation

Policy recommendations prepared by the Cyprus Marine and Maritime Institute (CMMI) following the conference *Riding the Wave: Advancing the EU Ocean Pact through Science, Innovation and Cooperation*, held in Ayia Napa, Cyprus, on 11–12 May 2026.

The **Cyprus Marine and Maritime Institute (CMMI)** is a Centre of Excellence dedicated to research, innovation, and technology development in the marine and maritime sectors. Through multidisciplinary research centres and collaborations with academia and industry, CMMI works to advance sustainable “blue economy” solutions addressing challenges such as maritime digitalisation, marine ecosystems, robotics, and ocean governance.

CMMI was established by the CMMI/MaRITeC-X project as a “Centre of Excellence in Marine and Maritime Research, Innovation and Technology Development” and has received funding from the European Union's Horizon 2020 research and innovation program under grant agreement No. 857586; and matching funding from the Government of the Republic of Cyprus.

Acknowledgements

CMMI sincerely thanks all speakers, moderators, rapporteurs, exhibitors, participants and partner organisations whose expertise and engagement contributed to the development of these recommendations.

Special thanks are extended to the Deputy Ministry of Research, Innovation and Digital Policy of the Republic of Cyprus, the Shipping Deputy Ministry, the Eratosthenes Centre of Excellence, the European Commission, and all partner organisations that contributed to the successful organisation of the conference.

Lead Authors

Mr. Zacharias Siokouros, CEO of the Cyprus Marine and Maritime Institute (CMMI)

Ms. Gotelenne Piaton, Teaming Project Manager and Head of RESU, CMMI

Dr. Kathy Christoforou, Project Manager, CMMI

Contributing Experts

Dr. Rana Abu Alhaija, Managing Director at Cyprus Subsea Consulting and Services, Cyprus

Mr. Nil Angli, Space Solutions Maritime Lead, European Space Agency (ESA)

Dr. Christos Arvanitides, CEO of LifeWatch ERIC

Dr. Antonella Autino, Programme Manager Partnership for Research & Innovation in the Mediterranean area (PRIMA)

Dr. Renuka Badhe, Secretary General of EuroGOOS

Dr. Konstantina Bereta, Director of Research Labs, Kpler, Greece

Ms. Rym Benzina Bourguiba, President of La Saison Bleue, Tunisia

Dr. Francesco Camonita, European Policy & Project Officer at Conference of Peripheral Maritime Regions (CPMR)

Prof. Siri Granum Carson, Professor at Norwegian University of Science and Technology NTNU Oceans, Norway

Ms. Christina Deligianni, CEO and Co-founder Verimpace, Greece

Dr. Anna Demetriou, Senior Associate Scientist, CMMI

Ms. Tatiana Der Avedissian, Head of Business development, World Ocean Initiative, The Economist Group

Prof. Ruben Eiras, Secretary General (CEO) of Fórum Oceano – Associação da Economia do Mar, Portugal

Prof. Paolo Favali, R&D Senior Consultant at WSense, Italy

Ms. Fernanda Ferreira, Master's student in Law and Economics of the Sea at NOVA School of Law, Early Career Ocean Professional (ECOP) representative, Portugal

Mr. Jaap Gebraad, Secretary General of Waterborne

Dr. Daniel Hayes, Marine Sciences Research Director, CMMI

Prof. Sheila Heymans, Executive Director of the European Marine Board

Prof. Yannis Ieropoulos, Chair in Environmental Engineering, Head of Civil, Maritime and Environmental Engineering Department, University of Southampton, United Kingdom

Dr. Pantelis Katharios, Founder, Aquatic Biologicals and Researcher at Hellenic Centre for Marine Research, Greece

Mr. Spyros Kouvelis, Member of the Board of the EU Mission 'Restore our Oceans and Waters by 2030'

Mr. Liam Lacey, Director of Irish Maritime Development Office (IMDO), Marine Institute, Ireland

Prof. Kate Larkin, Head of the European Marine Observation and Data Network (EMODnet) Secretariat

Ms. Raluca Ioana Man, Founder, RSEVEN | Strategic Advisor, Board Consultant & Startup Ecosystem Mentor, Cyprus

Prof. David Menier, President of Université Bretagne Sud (UBS), France

Dr. Christodoulos Mettas, Project Manager of the Marine Spatial Planning sector of the Cyprus University of Technology & Eratosthenes CoE, Cyprus

Mr. Nikolaos Milionis, Member of the European Court of Auditors

Mr. José Luiz Moutinho, Consortia and Network Development Advisor, KAUST National Transformation Institute (NTI), Saudi Arabia

Dr. Nicolas Pade, Executive Director of the European Marine Biological Resource Centre (EMBRC-ERIC)

Dr. Mathieu Poupon, Postdoctoral Researcher at CNRS-LOCEAN (IPSL, Sorbonne Université), Early Career Ocean Professional (ECOP) representative, France

Mr. Giuseppe Provenzano, Project Manager for Research and Innovation at the Union for the Mediterranean

Mr. Nicholas Rich, Director of Fleet Management at Bernhard Schulte Shipmanagement Ltd, Cyprus
